

**Description**

This low duty aluminium intrinsically safe switchbox encloses a dual sensor, mounted on a printed circuit board, for indicating the fully open and fully closed actuator positions.

The dual sensor is operated by a cam on an extension of the actuator drive shaft and all mechanical parts are contained within the enclosure.

The standard switch operation is "unswitched", optional the operation can be supplied as "switched".

The dual sensor is pre-wired on a printed circuit board and is easily accessible when the top cover is removed. The cover screws are captive.

The switchbox is mounted on top of the actuator with an accessory bracket according VDI/VDE 3845 (NAMUR). Actuators optionally incorporate a visual position indicator.

**Ingress protection**

The enclosure is ingress proof to IP65 and as such completely dust and water tight.

**Certification**

The switchbox is certified for use in zones 0, 1, 2, 20, 21 and 22 with all gas and dust groups.

**Product marking**

**ATEX - Zones 0, 1, 2, 20, 21 and 22**

Method: Intrinsically safe

Marking:

⊕ II 1G Ex ia IIC T6...T4 Ga

⊕ II 1D Ex ia IIIC T<sub>200</sub>T41°C...T80°C Da

Certificate: DEKRA 18ATEX0079 X

Temperature: -20°C to +80°C

The actual upper temperature may be limited by the application.

See examination certificate or manual for more detailed info.

**Specification**

**Switches**

Make: Pepperl & Fuchs  
 Type: PL2-F25-N4-K  
 Voltage: 8 VDC (Ri = 1kOhm)  
 Amps (output): Switched, <1mA, Unswitched, >3mA  
 Standards: DIN EN 60947-5-6 (NAMUR)  
 Switch operation: Standard "Unswitched" Option "Switched"

**Housing**

Material:  
 Electrical Entry: Aluminium alloy  
 Enclosure: 1x M20x1,5  
 Mounting: IP65  
 Acc. NAMUR VDI/VDE 3845, the F12 Actuator has his own bracket

**Identification**

LDNA-IS8 Aluminium enclosure with Pepperl & Fuchs PL2-F25-N4-K

**Option**

Vestamid housing

**supplied, pre-installed cable gland**

Clamping and sealing range: 5-9 mm  
 Torque clamping nut: 4,5 Nm

**Specific conditions of use**

Because the enclosure of the switchbox type LDNA-IS is made of aluminium, if it is mounted in an area where the use of category 1 G apparatus is required, it must be installed such, that even in the event of rare incidents, ignition sources due to impact and friction sparks are excluded.

Because the enclosure of the switchbox type LDNA-IS is painted, if it is mounted in an area where the use of category 1 D or 2 D apparatus is required, electrostatic charges on the coated parts of the switchbox shall be avoided.
